#### **DETAILED ACTION**

This action is responsive to communication filed on September 16, 2004.

## Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-4, 7, 16, 22-30 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Regarding claims 1, 16, the phrase "physical characteristics of the customer" in both occurrences, considers as a new matter because it was not described in the specification.

Claims 2-4, 7, 22-30 are rejected for the same reason since they depend from rejected claims.

# Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 1-4, 7, 16, 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lenander (US 6,206,165) in view of Pena (US 6,704,039).

Regarding claim 1, Lenander discloses a method to detect and reward the return of shopping carts to collection points at a shopping center (abstract) wherein during a purchase, a first signal A is generated (after completion of the purchases, the stationary electronic device 18 will send a recording signal with respect to the purchases having taken place) (col. 3, lines 39-56), when the shopping cart is returned to a collection, a second signal B is generated (this recording via an electronic indicator 17 initiate an optical and/or acoustical signal with the information that the returning of the service cart has occasioned a reward) (col. 3, lines 57-65); wherein the two signals A and B are correlated to issue a bonus (col. 3, lines 39-65; col. 4, lines 37-56); comprising: the step of correlating the first signal A with the second signal B (col. 3, lines 39-65).

Lenander discloses every feature of the claimed invention but fails to explicitly disclose the step of assigning the first signal A to a certain customer by identifying or individualizing the customer by optical recognition of physical characteristics of the customer.

However, Pena discloses the step of assigning the first signal A to a certain customer by identifying or individualizing the customer by optical recognition of physical characteristics of the customer (read by OCR, the

purchaser's photo would be taken at the time of the purchase) (col. 23, line 12 and lines 46-47).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate Pena's recognition of physical characteristic of the customer in Lenander. Doing so would modify Lenander's system with Pena's recognition of physical characteristic of the customer in order to clearly identify the purchaser to accurately receive his/her rewards; thereby preventing unauthorized person from receiving the reward so improving the efficiency of the system.

Regarding claim 2, Lenander discloses the step of generating the second signal B when any shopping cart is returned to a collection point (col. 3, lines 57-65).

Regarding claim 3, Lenander discloses the step of generating the second signal B when the returned shopping cart had previously been located outside of the collection (outdoor of the collection station) for longer than a preset time period (col. 2, lines 2-24).

Regarding claim 4, Lenander discloses the second signal when the shopping cart had been previously used to go shopping (col. 3, lines 57-65).

Regarding claim 7, the above combination discloses all the limitations in claim 1 and Pena further discloses optical recognition system (OCR in col. 23, line 12).

Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate Pena's optical recognition in Lenander. Doing so would modify Lenander's system with Pena's optical recognition in order to clearly identify the purchaser to accurately receive his/her rewards; thereby preventing unauthorized person from receiving the reward so improving the efficiency of the system.

Regarding claim 16, Lenander discloses a system for detecting and rewarding the returning of shopping carts to a collection point (abstract) comprising: a first detection means (electronic signal director 20) generating the first signal A (after completion of the purchases, the stationary electronic device 18 will send a recording signal with respect to the purchases having taken place), a second detection means (electronic indicator 17) generating a second signal when a shopping cart is returned to a collection point and a data processing unit (electronic device 18) to correlate the two signals A and B to issue a bonus (this recording via an electronic indicator 17 initiate an optical and/or acoustical signal with the information that the returning of the service cart has occasioned a reward) (col. 3, lines 39-65; col. 4, lines 37-56)

Lenander discloses every feature of the claimed invention but fails to explicitly disclose the step of identifying or individualizing a particular customer by optical recognition of physical characteristics of the customer when generating the first signal A.

However, Pena discloses the step of identifying or individualizing a particular customer by optical recognition of physical characteristics of the customer when generating the first signal A (read by OCR, the purchaser's photo would be taken at the time of the purchase) (col. 23, line 12 and lines 46-47).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate Pena's recognition of physical characteristic of the customer in Lenander. Doing so would modify Lenander's system with Pena's recognition of physical characteristic of the customer in order to clearly identify the purchaser to accurately receive his/her rewards; thereby preventing unauthorized person from receiving the reward so improving the efficiency of the system.

Regarding claim 22, Lenander discloses a second detection means (electronic indicator 17) for recognizing whether the returned shopping cart has been stored into the shopping cart stacked row provided at the collection point within a prescribed tolerance (col. 1, lines 1-23).

5. Claims 29-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lenander in view of Pena and further in view of Storey (US 6,578,012).

Regarding claims 29-30, Lenander and Pena disclose all the limitations in claims 1, 16 but fail to specify that a status of the bonus is viewable by the customer through an Internet connector.

However, Storey discloses a status of the bonus is viewable by the customer through an Internet connector (col. 2, lines 23-32).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate Storey's bonus through Internet connector in Lenander and Pena. Doing so would modify Lenander and Pena's system with Storey's bonus through Internet connector in order to check accurately the reward over the Internet, thereby improving the efficiency of the of the system.

## Allowable Subject Matter

- 6. Claims 23-28 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, first paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
- 7. The following is a statement of reasons for the indication of allowable subject matter: In combination with all the limitations in the claims, the prior arts fail to teach or make obvious: the first detection means includes an optical signal transmitter located in the shopping center and the second detection means includes a second optical signal transmitter at the collection point and a number of optical detectors that cooperate with the first and the second signal transmitters said detectors being attached to the shopping carts and being provided for the generation signals A and B.

## Response to Arguments

8. Applicant's arguments with respect to claims 1-4, 7, 16, 22-30 have been considered but are most in view of the new ground(s) of rejection.

#### Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Smith (US 3,882,982) discloses a method and apparatus for encouraging return of shopping carts.

Peggs (US 3,897,863) discloses a cart reception and reward mechanism.

Unger (US 4,470,495) discloses a device for encouraging the return of shopping carts.

Havens (US 4,868,544) discloses a shopping cart retrieval system.

DiPaolo et al. (US 5,402,106) discloses a shopping cart theft prevention system.

Burke (US 5,848,399) discloses a computer system for allowing a consumer to purchase packaged goods at home.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel Previl whose telephone number is 571 272 2971. The examiner can normally be reached on Monday-Thursday. The examiner can also be reached on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Daniel WU can be reached on 571 272 2964. The fax phone number for the organization where this application or proceeding is assigned is 571 273 8300 for regular communications and for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 571 272 2600.
